1. Introduction

10-Ball MicroPool is a powerful, easy to use pool game for your Series 60 mobile, providing the following features:

- “US-8 Ball”, “9-Ball”, “Killer”, “Speed” game types against your phone or a friend. Each game type can be played with full and reduced ball set
- Precise physics to ensure high level of playability
- Superior control on the cue-ball with spin support to make tricky shots
- Realistic graphics, with textured balls, light effects, shadows, light reflections, etc.
- Very fast rendering performance for fluent animation
- Realistic sound effects
- Human-like, adjustable artificial intelligence if you play against your phone
- 3 nice tables
- Demo mode
- English, German, Hungarian languages supported

2. Installation

See 10_Ball_MicroPool_Installation_Guide for installation information!

3. User manual

After starting the game you see the start-up screen. From here you can start new game, change settings, register game or just quit the application, using the “Options” menu.

3.1 Options menu

3.1.1 US-8 Ball lite/full

You can play pool with “US-8 Ball” rules against your phone, a friend or just see a demonstration.

Rules:

- The target is to pot the 8-ball legally
- In the beginning players decide who is playing with solid or striped balls. It is determined with the first legal pot of a solid striped ball
- Each player must pot his balls before 8-ball can be potted
- The status ball in the bottom-left corner indicates the target ball for the current player

3.1.2 9-Ball game

You can play pool with “9-Ball” rules against your phone, a friend or just see a demonstration.

Rules:

- The target is to pot 9-ball legally
- Players must hit the available lowest ball first. If the lowest ball is potted, the next lowest ball becomes the target
- The status ball in the bottom-left corner indicates the target ball for the current player

3.1.3 Killer

You can play pool with “Killer” rules against your phone, a friend or just see a demonstration.

- In the beginning players have 3 or 5 lives
- Players make shots by turns
- Each player must make a legal pot while playing, otherwise they lose a life
- If a player loses all his/her lives, the other wins
- The status window in the bottom-left corner shows the current standing

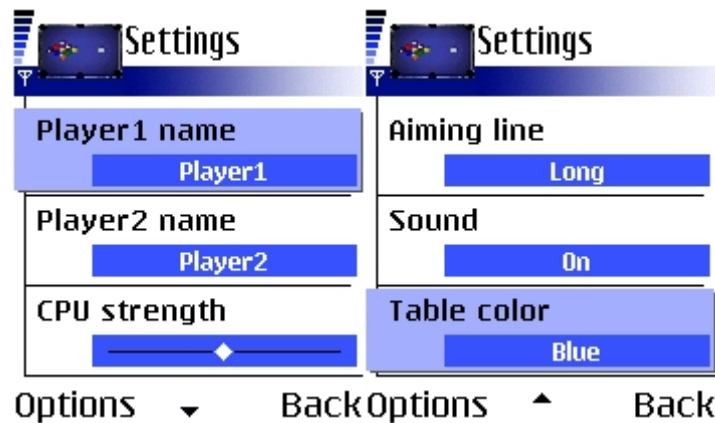

3.1.4 Speed

You can play pool with “Speed” rules or see a demonstration.

- The target is to remove all balls from the table as fast as possible
- The clock starts when first hitting the cue-ball
- There is 10 second penalty for an illegal shot
- The highest score is recorded
- The status window in the bottom-left corner shows the current time elapsed in the game

3.1.5 Settings

- You can set **2 player names** on the top of the screen. If you play against the phone, “Player1 name” is used. If you play against your friend, both names are used to identify players.
- Set **CPU strength** for games against your phone. There are five different levels available.
- Set the size of the **Aiming line** to adjust difficulty.
- You can turn **Sound** off if you don’t want the game to play sound effects. Note, that the game may play sound effect even if the phone is in “silent” mode.
- You can select 3 different table designs using **Table color** setting item

3.1.6 Register

This menu option is visible only if the game is not yet registered. See 10_Ball_MicroPool_Installation_Guide for more information about registration.

3.1.7 Help

You can get short help about how to make aiming and shooting in the game.

3.1.8 About

You can check the version number of the game here.

3.1.9 Exit

You can exit the application. Your game progress will be lost.

3.2 Playing pool

If there is no user activity in the game for 2 seconds the transparent status windows will appear on the screen. On the status windows you can follow the status of the game. While playing the game you can do the following when it is your turn:

3.2.1 Aiming

Press the joystick left or right to aim. The cue will rotate clockwise or anticlockwise accordingly. You can apply spin to the ball to make tricky shots: press and hold the “*”, “0” or “#” key and move the joystick to set the desired contact location for the cue-ball.

3.2.2 Shooting

If you are satisfied with the angle and the spin settings, press joystick down to start aiming. The longer you push down, the stronger the shot will be. See the shoot indicator appearing on the right side of the screen.

3.2.3 Ball in hand

If the opponent makes a fault, you can place the ball anywhere on the table before making the shot. Use the joystick to move the ball to the desired location and press OK to place the ball. Then you will be able to aim and shoot.

Enjoy the game!
